

Catch faults before they stop your assets.

AI-powered anomaly detection and predictive maintenance for wind, solar, geothermal and maritime assets. Works with your existing SCADA and OPC-UA data.

Learns what normal looks like

The platform models each asset's healthy operating behavior from its own history. Every point that drifts off the curve is flagged automatically.

Plans maintenance, not reactions

Rolling 48-hour forecasts of production and condition let teams schedule work before a small drift turns into unplanned downtime.

1 Connect

Plugs into your existing SCADA and OPC-UA infrastructure.

2 Learn

Builds a baseline of normal behavior for every asset.

3 Alert and forecast

Flags deviations early and looks 48 hours ahead.
