

Understand your cyber maturity, see where risk is concentrated, decide where to invest first.

Vestoria helps industrial organisations assess cyber maturity, turn maturity and risk into clear priorities and make evidence-based investment decisions, with one common reference across sites, frameworks and teams.

One board question. Many fragmented answers.

"Where do we stand on NIS2 across every industrial site?"

Excel & PowerPoint

A fragmented view of your current OT posture.

Point-in-time assessments

Point-in-time results that quickly become outdated.

Site by site

No consolidated view for leadership and the board.

FROM SITE EVIDENCE TO A GROUP DECISION

VESTORIA ANSWERS

Where to invest, how much, and in what order.

Priorities derived from assessed maturity gaps, open risks and site criticality, not from opinion.

WHY VESTORIA

- **Structured self-assessment.** Who takes part, at what pace, fully under your control.
- **Evidence-based decisions.** Priorities built from assessed gaps, open risks and estimated CapEx / OpEx.
- **Site evidence, group decisions.** Held at site level, rolled up for the group.
- **OT-native governance.** Sites, plants, assets and production risk, where most platforms remain IT-centric.

Make your OT security investment decisions with evidence.

Start with one site, prove it, then scale.
